Importance of the Tree Plantation

Trees give off oxygen that we need to breathe. Trees reduce the amount of storm water runoff, which reduces erosion and pollution in our waterways and may reduce the effects of flooding. Many species of wildlife depend on trees for habitat. Trees provide food, protection, and homes for many birds and mammals.

Plantation of trees and plants aids in making the environment better. It purifies the air, conserves water, helps in climate control, preserves soil and benefits the overall environment in several other ways.
